

## Validation Tab

---

In this tab, appoint server-specific validators to perform real-time validation of applications, in case your server poses additional requirements to Web components you are deploying.

This server-specific validators are presently supported for the *Weblogic* application servers only.

The tab is not available for artifacts of the types *Jar* and *Other*.

For the details on common options, click [here](#).

Item	Description
Application Server Specific Validators	This read-only field shows a list of current application server validation extensions to apply.
Add	Click this button to select the class that implements the relevant validator in the dialog box, that opens.
Delete	Click this button to remove the selected entry from the list.
