

## Viewing Styles Applied to a Tag

For HTML, XHTML, JSP and JSPX files, IntelliJ IDEA suggests a way to explore all styles applied to an arbitrary tag.

The results for each tag are displayed in the dedicated tabs of the **CSS Styles** tool window. Using this tool window, you can view the list of styles applied to a tag, and the definition of these styles. Besides that, you can navigate from style to the corresponding tag in the source code.

### To show styles that are used for a tag

1. Open the desired file in the editor, and right-click the tag you want to explore for applied styles.
2. On the context menu, choose **Show Applied Styles for Tag**.
3. View results in a dedicated tab in the CSS Styles tool window:
