

Viewing Table Data from the Data Sources Tool Window

You can access tables immediately from the **Database** tool window, without executing queries explicitly.

To view the structure of a table

1. In the **Database** tool window, expand the desired **data source** node.
2. Select the desired table and press **Ctrl+Q** or **Alt+Button2** click. IntelliJ IDEA opens a quick documentation look-up window, which displays the following information:
 - The `CREATE TABLE` query through which the table has been created.
 - Results of executing the `SELECT * FROM table_name` query (the first 10 rows of the table).
