

# Web Contexts

---

File | Settings | Web Contexts

---

Use this dialog box to specify the Web context settings that IntelliJ IDEA uses to resolve Web paths in HTML and JSP for a file, directory, or the entire project.

The dialog box is available only when the *Java Server Pages Integration* plugin is installed and enabled. The plugin is bundled with IntelliJ IDEA and activated by default. If it is not, enable it as described in [Enabling and Disabling Plugins](#).

Item	Description
File/Directory	Select the file, or directory, or project to specify a Web context for. <div style="border: 1px solid #ccc; padding: 5px; margin-top: 5px;">Expand the nodes in the tree until you access the required item.</div>
Web Context	In this drop-down list, select the relevant Web context. <div style="border: 1px solid #ccc; padding: 5px; margin-top: 5px;">If you select the <b>Clear</b> option, Web paths in the corresponding file or directory are resolved using the Web context setting inherited from the parent.</div>
