

Web Module Editor - General

Web Tool Window | Context Menu of Web module | Jump To Source | General

Use this tab to set the Web application general options, create and configure servlets and filters.

The tab contains the following three panes:

- [General](#)
- [Servlets Configured](#)
- [Filters Configured](#)

General

Use this pane to specify the general application settings.

Item	Description
Display name	Specify a short display name of the Web application.
Description	Provide a description of the Web application.
Distributable	Select this check box to enable running the Web application in a distributed environment.

Servlets configured

Use this pane to create, edit, and remove servlets in the Web application.

Item	Shortcut	Description
	Insert	Click this button to add a new servlet. The New Servlet dialog box appears.
	F4	Click this button to edit the settings of the selected servlet.
	Delete	Click this button to remove the selected servlet from the Web application.

Filters configured

Use this pane to create, edit, and remove filters in the Web application.

Item	Shortcut	Description
	Insert	Click this button to add a new filter. The New Filter dialog box appears.
	F4	Click this button to edit the settings of the selected filter.
	Delete	Click this button to remove the selected filter from the Web application.
