

Web Module Editor

Web Tool Window | Context Menu of Web module | Jump To Source

Use this dedicated [Web Module Editor](#) window to edit the `web.xml` deployment descriptor. The window contains four tabs: **Text**, [General](#), [Assembly Descriptor](#), and [Assembly Descriptor References](#). IntelliJ IDEA generates code in `web.xml` based on the settings you specify in the tabs.

In this part:

- [Web Module Editor - General](#)
- [Web Module Editor - Assembly Descriptor References](#)
- [Web Module Editor - Assembly Descriptor](#)
