

Web Service References

[Web Tool Window](#) | [Context Menu of a Web module](#) | [Jump To Source](#) |

Assembly Descriptor References

In this pane, define the references to external Web services by using "logical" names called Web service references.

Based on the settings you specify in this pane, IntelliJ IDEA generates the properties of the `<service-ref>` element in the `web.xml` descriptor.

Item	Property generated in <code>web.xml</code>	Description
Web Service References	<code><service-ref-name></code>	In this field, specify the name of the Web service used in the code of the Web application.
		Click this button to open the Edit Web Service Reference dialog box. <div style="border: 1px solid #ccc; padding: 5px; margin-top: 10px;">The button is available only in a selected row.</div>
Type	<code><service-ref-type></code>	Use this drop-down list to select the class that implements the reference.
Description	<code><description></code>	In this field, provide a description of the Web service reference.
Service Interface	<code><service-interface></code>	In this field, specify the class that implements the Web service interface.
WSDL File	<code><wsdl-file></code>	In this field, specify the absolute file path, relative file path, or URL to the Web service definition (WSDL) file.
