

Working with Search Results

The search results display in the [Find tool window](#). The results of each search display in a separate tab.

Using the controls and the context menu of this tool window as well as the main menu, you can:

- Navigate [to source code](#).
- [Exclude and include](#) search results in refactoring.
- Add selected search results [to favorites](#).
- Show the results of the [recent find usages](#).
- View [local history](#) of the selected usage.
- Perform [version control](#) operations using the specific VCS, associated with the parent directory of the usage.
